Geyser Launch New Range of Electric Radiators

Designer heating specialist, Geyser has launched a new range of Electric Radiators to meet the demands for homes without a central heating system (such as apartments) or conservatories which don't typically have pipes running into them. An electric radiator connects to your household mains electricity and runs on the same voltage as most household electrical appliances.

Our new range includes both a choice of portrait and landscape designs, available in a choice of different colours. All models come complete with the appropriate wattage of elements and all our customers will require is an electrician to fit the radiator for them.

As with all our products we have show images of them from all angles to give you the best idea of how these radiators will look in your home, without the need to see these for yourself before making the decision to buy them.

- ENDS -

Geyser has been trading online since May 2003 and has sold over 30,000 radiators and heated towel rails into the UK marketplace. Geyser sell both to consumers and trade (including resellers, plumbers, interior designers & building contractors). www.geyser.co.uk
